Cementing Relationships

Product Benefits of using **ACC Gold Water Shield**

- Has integral water repellent properties with water repellency at Particle Level
- Reduced capillary action resists the permeation of water, thus making it damp resistant
- No use of fatty acids, organic polymers, hence no adverse impact on strength & durability
- It's a pre-homogenised material, thus eliminating any possibility of over, under or missed dosage & spillage as compared to any other water proofing chemicals
- It has intrinsic properties that reduces Sorptivity and Permeability
- Suitable for any construction, right from foundations, slabs and columns; especially in areas with shallow water table

Enhanced strength

ACC Gold Water Shield cement gives higher compressive strength in Concrete

M 20 CONCRETE	Compressive Strength (Mpa)		
	3 days	7 days	28 days
PPC	12.2	15.5	24.2
ACC Gold Water Shield	15.1	19.1	29.6

ACC Gold Water Shield cement doesn't use fatty acid, hence has no adverse impact on strength and durability

Lesser Permeability - Better Durability

Water Permeability - As per DIN 1048 & Karsten Tube Test for Concrete
